VLAN & Inter-VLAN Routing

Restriction

Support 4K VLANs.

Known issue:

On Barefoot series, the VLAN 1 default disable MAC learning. It means all of traffic will be flooding.

VLAN tag and untag settings

Topology:

mceclip0.png

Steps 1. Create VLAN1 and VLAN2 on the switch

admin@sonic:~\$ sudo config vlan add 1
admin@sonic:~\$ sudo config vlan add 2

Steps 2. Make sure that the port configuration of the VLAN member is not a router port. If the port is configured as a VLAN member of a router port, you will get the following error:

admin@sonic:~\$ sudo config vlan member add 1 Ethernet48 Usage: config vlan member add [OPTIONS] Try "config vlan member add -h" for help.

Error: Ethernet48 is a L3 interface!

Note. If you face the same error message, you should use the command "sudo config interface ip remove Ethernet48 [IP Address]" to remove IP on the interface. (Detail command information, you can refer to the CLI guide)

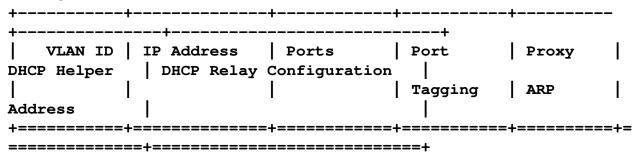

Steps 3. Let the Ethernet48 as VLAN1 untag member.

admin@sonic:~\$ sudo config vlan member add -u 1 Ethernet48 Steps 4. Let the Ethernet52 as VLAN2 tag member.

admin@sonic:~\$ sudo config vlan member add 2 Ethernet52
Result

Check the VLAN setting by command or

admin@sonic:~\$ show vlan brief

How to add range of VLAN members? Tested model & firmware version:

Switch model name: DCS203 (AS7326-56X)

Edgecore SONiC version:

202012.4

Problem description:

SONiC could only add VLAN members one by one to the Interface. How to add range of VLAN members?

admin@sonic:~\$ sudo config vlan add 10,20 Usage: config vlan add [OPTIONS] <vid>Try "config vlan add -h" for help.

Error: Invalid value for "<vid>": 10,20 is not a valid integer

admin@sonic:~\$ sudo config vlan add 10-20 Usage: config vlan add [OPTIONS] <vid>Try "config vlan add -h" for help.

Error: Invalid value for "<vid>": 10-20 is not a valid integer Solution:

Users can use the For Loop to create a range of VLANs.

For example:

admin@sonic:~\$ for i in {2000..2010..1}; do sudo config vlan add \$i; done

admin@sonic:~\$ for i in {2000..2010..1};do sudo config vlan
member add \$i Ethernet0; done

Note:

Where 2000 is the starting vlan and 2010 is the last vlan and the vlan number increases by 1 with each loop.

Check the status.

admin@sonic:~\$ show vlan brief
